

# Face It!

Today you will learn the proportions of the face to make a realistic self-portrait! Are you ready?

1. Head: In order to draw a head, we need to draw a large egg-shaped oval. Remember to draw large!

2. Eyes: Most people do not realize it, but they eyes are halfway down the face! Also, if you look at someone, they will have room for five eyes across the face!

3. Nose: The size of the nose depends on the individual person. However, the bottom of the nose is usually halfway between the eye line and the chin. The bottom of the nose is often as wide as the inside corners of the eyes.
